RivetKing® Timeline

Founded in 1912, Industrial Rivet & Fastener Company has grown from a primarily local operation with four employees to a global distributor, manufacturer and importer with nine international locations, 10 U.S. distribution centers and 48 employees serving customers both around the corner and across the globe.

1912

Established in NYC as a supplier to NY Port Authority for bridges, representing Bethlehem Steel in the NYC area

1914

Began carrying stock to support demand

1944

Developed specialty fasteners to support war efforts

1930

Expanded product line to smaller diameter products

1950

First documented evidence that IRFCO became known and named by its customers as the "RivetKing"

1962

Sales and marketing developed the RivetKing brand into an entire product line

1968

General Rivet Manufacturing opened for business and would ultimately be purchased by IRFCO in 1992. General Rivet manufactured solid and semitubular rivets and developed a semitubular product line for small electronics.

1975

Established IRF Taiwan as manufacturing arm for production

1998

Moved corporate headquarters to Northvale, NJ combining manufacturing and distribution functions. Became ISO9001

1990

Expanded domestic manufacturing facility, renamed it RivetKing Manufacturing

2009

IRF Germany opened

2005

10 new domestic warehouses opened in Texas, California, Kansas City, Canada, Denver, Salt Lake City, and Chicago

2010

Developed the database logging and live retrieval of force testing, dimensional inspection and salt spray testing data

2008

Significant technology upgrade to conform to ISO 17025 in quality control and engineering, including purchase of salt spray, force, and micro hardness testing equipment. All quality systems conform to ISO/TS 16949 and ISO17025

2011

IRF Japan and IRF Australia opened

2012

100 Year Anniversary
Launch of Green Initiative

RivetKing® QUALITY SERVICES

Performance Testing Capabilities

RivetKing® products are quality tested on state of the art inspection equipment. Our capabilities include Salt Spray Testing, Shear Testing, Tensile Testing, Pushout Testing, Mandrel Retention Testing and Lock Strength Testing. Data is gathered across production lots and retained on file for 3 years. Graphic representations of performance are available and provided upon request. Product/Lot/Competitor comparisons are performed regularly.

FORCE TESTING

When needed, we can measure a rivets performance with our MTM, a machine used to detect force. The resulting curve plots load force needed to set or break a rivet. This fingerprint allows us to more exactly determine the holding power of the riveted assembly and/or further evaluate its performance. We can detect small differences in performance and its results go directly to R & D to further improve the performance of our product, and yours.

SALT FOG TESTING

On a regular basis we check all spec finishes with our advanced salt spray testing equipment. Nationally rated and quality certified, we provide test results to measure the effectiveness of our finishes, before and after riveting as necessary. Temperatures are controlled and monitored 24 hours a day, 365 days a year via our windows based control software. Reports are generated regularly for internal use and for customers.

RIVETKING® 2 IN 1- BLIND RIVET & RIVET NUT TOOL

RK-21	BLIND RIVETS = 1/4" & STRUCTURAL RIVET NUTS = 3/8" OR 10MM
-------	---

WHY BUY TWO TOOLS WHEN YOU ONLY NEED ONE?

This unique tool has the ability to set both blind rivets and rivetnuts. It even has the ability to set 1/4" structural blind rivets and rivetnuts up to 3/8". The changeover from blind rivets to rivet nuts is simple and takes less than 1 minute. It's patented fold away design makes it easy to carry and store. It contains a nose piece for blind rivets and mandrels for rivetnuts in every size and is conveniently stored in the blow molded carry case. Forged Steel arms insure durability while comfort soft touch rubberized grips guarantee comfort.

RK-93	3/16" MAX. NOSEPIECES ONBOARD
-------	----------------------------------

COINED AS THE BIG MAMMA, THIS GEARED RIVETING TOOL HAS EXTREME MECHANICAL ADVANTAGE AND CAN SET EVEN STRUCTURAL RIVETS WITH EASE DUE TO ITS LONG STROKE AND HIGH POWER. THE HANDLES ARE DESIGNED TO PROVIDE THE USER WITH EXTREME LEVERAGE IN DEMANDING APPLICATIONS

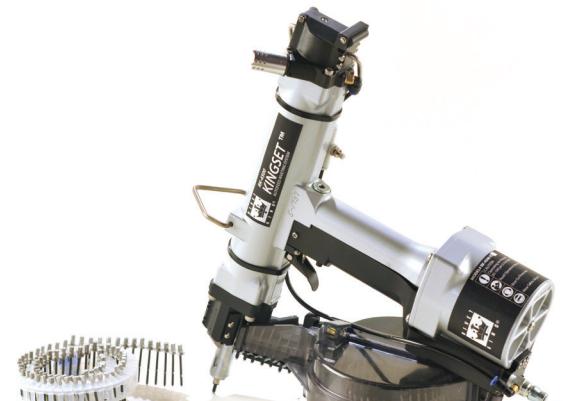

KINGSET RIVETING SYSTEMS

Rivets are provided on a continuous feed system. Rivets are factory installed in Polyester film which is fed through the nose of the riveter. Once the rivet is applied the next rivet is fed to the nose. Spent mandrels are drawing into a mandrel catcher located at the rear of the tool. Most standard blind break stem blind rivet can be installed into the Polyester film strips.

AVAILABLE MODELS

RK4500-KS5	1/8" & 5/32"
RK4500-KS6	3/16"

RivetKing® rivets that can be installed into Polyester film strips:

Standard Rivets:

- Open End
- Closed End
- MultiGrip™
- Trifix
- PLR™ Rivet

Semi-Structural Rivets:

- RKQ™
- Rivinox®
- Rivex®
- Rivibull®
- SuperTriFix™

Structural Rivets:

- In-Lock®

RivetKing® Blind Rivet Tools • Pow Pneudraulic & Electric

RK-8000 SERIES RIVETKING® TOOLS

QUICK, LIGHT, ERGONOMIC AND SHOCK RESISTANT.

The RK-8000 Series is the best choice for demanding, high volume production-oriented environments. Triple Jaws, and Vacuum mandrel collection comes standard.

The RK-8000S is perfect for 1/8" diameter rivets, while the RK-8000M is best for 3/16" and 5/32". For extended grip or structural rivet applications, the RK-8000LS is suggested. The RK-8000LS is designed with an extra long stroke to insure that the rivet is applied and mandrel is withdrawn completely from the rivet in almost any grip range.

RK-8000S

5/32" MAX.
& STRUCTURALS

RK-8000M

3/16" MAX.
& STRUCTURALS

RIVETKING® LONG STROKE - RK-8000LS

RK-8000LS = LONG STROKE PERFORMANCE!

Extra long stroke, lightweight, ergonomic and shock resistant with triple jaws and vacuum mandrel collection. The RivetKing® RK-8000LS is perfect in long stroke applications such as:

RK-8000LS 1/4" MAX.
& STRUCTURALS

THE RK-8000LS IS BEST FOR:

- Structural Rivets
- PLR™ Rivet
- Trifold Rivets
- Long Length Rivets
- Rivets used outside the intended grip range

RK-BCS BUCKET COLLECTION SYSTEM

The bucket collection system comes integrated with a high power pneumatic vacuum which is attached via a small hose in place of the mandrel collection cup. It will withdraw spent mandrels up to 10 feet away from the RK-8000 riveter.

RK SERIES RIVETKING® ECONOLINE™ TOOLS

BUILT WITH QUALITY AND ECONOMY IN MIND, THE RK SERIES RIVETERS HAVE ENOUGH FORCE TO PULL ANY RIVET.

Perfect for DIY market and for situations where abuse or theft is of concern. The RK-6000VS is an ergonomic and lightweight model that has Vacuum Mandrel collection and is a break-away from the traditional design.

RK-400CR BATTERY POWERED CORDLESS RIVET GUN

The RK-400CR cordless battery powered riveter is ideal for off-line and outdoor riveting applications where compressed air is not available.

RK-400CR FEATURES:

- 14.4V Lithium battery, cordless electric riveter.
- Sets up to 3/16" rivets in all materials.
- Includes 3 nosepieces for 1/8", 5/32", and 3/16" rivets.
- Compact, lightweight design.
- "Quick Set" trigger mechanism for rapid rivet placement.
- Comes packaged with charger and battery pack in molded plastic carrying case for convenient field use.
- Ideal for off-line and outdoor riveting applications where compressed air is not available.
- Designed with built in mandrel collector.

Capacity: 3/32" (2.4 mm)

3/16" (4.8 mm)

Stroke Length: 0.79" (20 mm)

Traction Power: 1,870 lbs. (850 kg)

Weight with Li-ion: 4.6 lbs. (2.1 kg)

Battery pack: 14.4 V/Li-ion / 3.0 A.h

Charge time: Approximately 60 min.

Tool accepted: Ni-cad / Ni-MH /Li-ion

CELUS®
MADE IN THE USA
A RIVETKING® BRAND

RivetKing® Automation

TOOLS

QUICKRIVETING SYSTEM®

Rivets are provided on magazines called pods with up to 80 rivets on a pod. Pods are easily loaded into a lightweight 3lb riveting handle for installation of up to 1 rivet per second. Rivets are installed by the withdrawal of a re-usable mandrel and radially expanding the entire body of the rivet. Because the mandrel is completely withdrawn there is no mandrel waste on the assembly floor. Perfect for electronics applications.

ADDITIONAL ADDED

VALUE FEATURES INCLUDE:

- Increased Output
- Reduced Labor
- Minimal Waste
- Improved Ergonomics
- Cost Savings
- Improved Joint Quality and Performance
- Fine Tuning and Flexibility
- Reliability and Consistency

RivetKing® Kingset™

TOOLS

KINGSET™ – A REVOLUTIONARY RIVET DELIVERY SYSTEM

KINGSET™ IS A SOPHISTICATED HANDHELD RIVETING SYSTEM OFFERING USERS A TRULY UNPRECEDENTED LEVEL OF FUNCTIONALITY.

With auto-feed capabilities – KingSet™ can literally be used to set any type of 1/8", 5/32" and 3/16" breakstem blind rivet pre-loaded on tape. And since KingSet™ has been engineered and designed for different application ranges, it can easily adapt to a variety of manufacturing environments.

The incredible flexibility of our best-in-class rivet delivery system also provides a fast setting operation that includes rapid reload and cycle times. The result is an immediate increase in productivity and significant cost savings with the reduction of in-place installation. For even greater efficiency, an adjustable vacuum system minimizes air consumption based specifically on the size of the rivet being set.

KingSet™ is a fully portable, ergonomically balanced tool that can be suspended either horizontally or vertically. This is combined with a highly engineered, one-touch operation that allows users to set rivets automatically while leaving one hand free to hold work pieces in place. Plus, a built-in Mandrel Collection System (MCS) helps insure work place safety and cleanliness.

Perfect for mid-range to high volume applications, KingSet™ provides a strong, reliable joint while effectively streamlining the assembly of everything from appliances, to automotive products, to electronic chassis, to HVAC and other sheet metal fabrications.

KINGSET™ STREAMLINES THE ASSEMBLY

Sheet Metal Fabrications Including Appliances, Automotive Products, Signage, and More.

SERVICE AND SUPPORT

With eight international locations, ten U.S. distribution centers, and nearly seventy employees – RivetKing® is uniquely positioned to deliver a superior and innovative product set backed by exemplary service and unmatched quality.

When you choose KingSet™, our Application Engineers will conduct an in-depth evaluation of your operations and make recommendations on how this automated, handheld tool can best work in your environment. In addition, our experts are always available by phone or on site to provide technical support for any product; even another manufacturer's current and past rivet delivery systems.

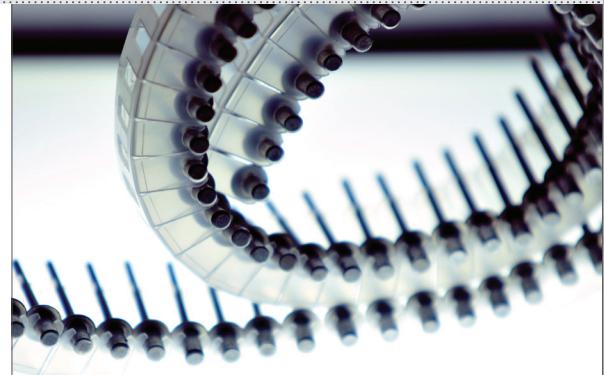

Simply put, KingSet™ gives you all the reliability you are used to, but with a far greater range of applications and with the ability to use our self-feed riveting system with any manufacturer's rivets.

RIVETKING® FOR EVERYTHING YOU NEED

As a world-class manufacturer, distributor and importer – RivetKing® gives you access to the industry's deepest inventory of ready-made rivets. Our extensive knowledge of permanent fasteners and vast manufacturing network also means we can make custom products in any head style, length, material and finish, including:

- BLIND RIVETS
- SPEED RIVETS
- RIVET NUTS
- SOLID RIVETS
- SEMI-TUBULAR RIVETS
- SPLIT RIVETS
- SHOULDER RIVETS
- COLLAR RIVETS
- DRIVE RIVETS
- LOCKBOLTS

All this is combined with a wide array of innovative rivet delivery systems, including our ground breaking KingSet™ handheld tool.

RivetKing® Kingset™

BENEFITS AT A GLANCE

AUTO-FEED

- Pre-loaded rivets on tape

FAST OPERATION

- Reload time: 8-10 seconds
- Cycle time: 2 seconds

EASY-TO-USE

- One-touch cycle
- Built-in MCS
- Adjustable vacuum

RELIABLE

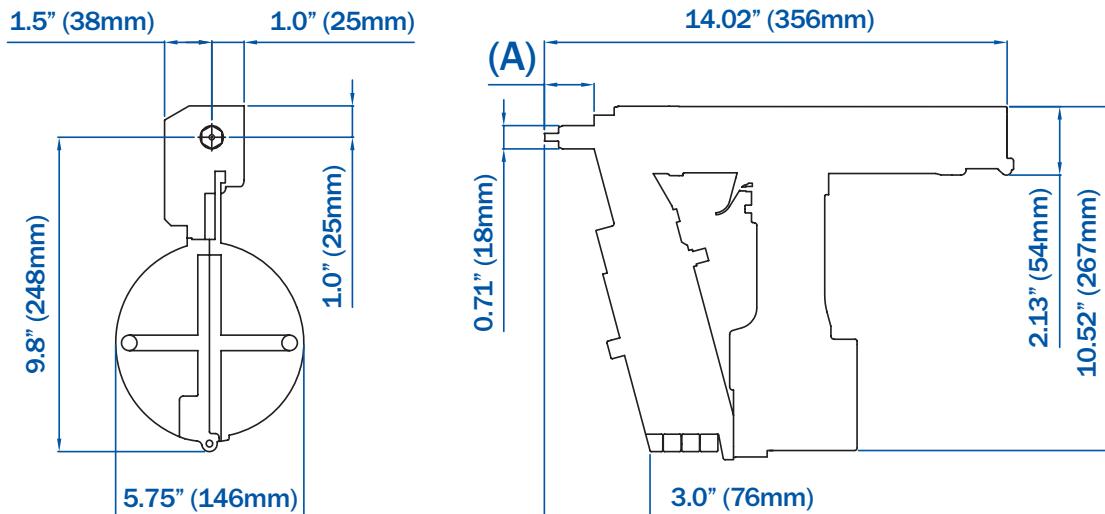

- Three jaw system
- Longer maintenance interval

PORTABLE

- One free hand
- Ergonomically weight balanced

RK-50-SP SERIES • RIVETKING® SPIN-PULL TOOLS

Built with quality and economy in mind...
the RK series riveters have enough force to pull any rivet
economy, value, functionality

The first spin-pull available for a value. With all the bells and whistles, lightweight, and ergonomic. Mandrels are dog pointed and comes in a unique hard case kit.

The RK-50-SP Series has the capability to pull #8 to 1/2-13 with quick change nose pieces. Stroke adjustment is at the bottom of the tool for convenience. This tool has a 1 button trigger.

THREADED INSERT SELECTION INCLUDED:
Sets: 8-32, 10-24, 10-32, 1/4-20, 5/16-18, 3/8-16

THREADED INSERTS ALSO SOLD SEPARATELY:
Sets: 1/4-28, 5/16-24, 3/8-24, 1/2-13, 1/2-20, M5, M6, M8, M10

MODEL# RK-50-SP
1/2" MAX.
M12 MAX.
Power: 6,565 lbsF
Stroke: .276"
Weight: 5.5 lbs

RK-LCD SERIES • RIVETKING® INTELLIGENT TOOLS

THE RK-777N AND RK-787N

The first rivet nut tools that have on-board intelligence. This spin-pull riveter can detect and report differences in the air pressure and stroke and can alert the operator if an improper reading is recorded.

Additional information can be recorded and reset such as # of life cycles, # of maintenance cycles and # of shift/job cycles. With this information preventative maintenance can be accurately performed at regular intervals. The LCD is at the left side of the tool. The trigger is 2 button, 2 stage.

RIVETKING® REVOLUTION™ LIGHTWEIGHT SPIN-SPIN RIVETNUT TOOLS

RIVETNUT TOOLS, ARE AMONG THE LIGHTEST, ERGONOMIC AND IN THE INDUSTRY.

We have all become accustomed to the heavy, steel and aluminum tools available on the market. NO MORE! Welcome to the world of the patented lightweight comfort design. The 2 stage rocker trigger design is unique and the clamshell housing allows for easy access and repair.

1 NOSE PIECE INCLUDED WITH TOOL. OTHERS SOLD SEPERATELY.

Your guide to selecting Rivetking® Blind Rivets

STRENGTH	RIVET MATERIAL	HOLE SIZE	WORK THICKNESS	RIVETTYPE	HEAD STYLE
Determine the shear and tensile strengths required for your application and then select the best rivet to meet that requirement. Rivet style, material, diameter and fastener spacing all contribute to the ability of a rivet to hold the material properly.	Select a rivet which is made of a similar or compatible metal to the material you are joining. Other factors to consider are the environment in which the finished product will be placed, levels of moisture, high temperatures or corrosive atmosphere.	Our rivets are available in five diameters: • 3/32" • 1/8" • 5/32" • 3/16" • 1/4"	Measure the total thickness of the material to be fastened in order to determine the required grip of the rivet. Be sure to select a sufficient grip range to allow the secondary head of the rivet to properly form.	RivetKing® Blind Rivets are available in several styles categorized as: • OPEN END • CLOSED END • MULTIGRIP™ • REAR FLANGE • LARGE FLANGE • LOAD SPREADING • LONG GRIP • RADIAL EXPANSION • STRUCTURAL (LOCKING) • HAMMER DRIVE	Three different head styles are available. Dome head is the standard. Large Flange for increased bearing surface and Countersunk for near flush installation in a countersunk hole.

DOMED HEAD

Industrial Rivet's part numbers are made up of six elements which, when correctly designated, completely describe the desired rivet. For large flange rivets, however, a 7th element (the suffix letter F) are required.

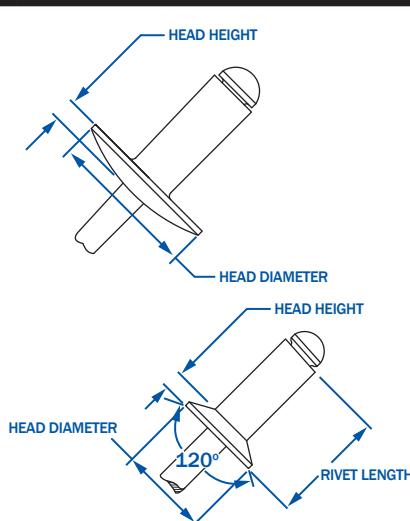

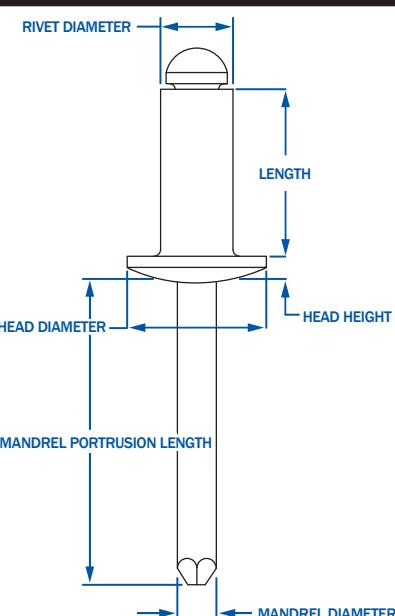

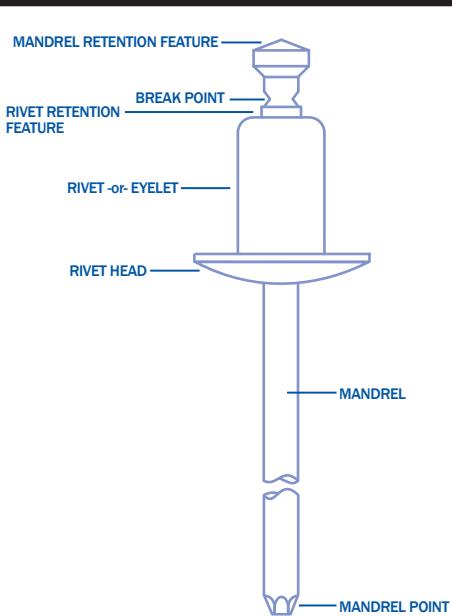

* In some instances these are replaced with a "part code" instead a fractional designation.

BLIND RIVET ANATOMY

RivetKing® FBS Series · Stainless/Steel Rivets · Open End

RIVET: 18-8 SERIES STAINLESS STEEL • MANDREL: STEEL TRIVALENT ZINC PLATED

RivetKing® Stainless Steel Rivet with Steel Zinc Plated mandrel (FBS) series is the economical alternative to FBF series. FBS Series offers similar shear and tensile strength and will hold its strength over time in corrosive environments. Because a steel mandrel has the potential to leave a rust trail, for aesthetic applications FBF series is recommended. IFI 114 Grade 50.

* 1/4" Diameter rivets have a 1.250 mandrel length minimum.

RivetKing® Back Up Washers

Use Back Up Washers when the hole size or the grip range is out of suggested specification. Also serves as an excellent bearing surface in thin sheet metal or plastics.

Or don't use Back Up Washers at all use: TriFix™, Rivinox®, or RiviBulb®

RK-8000 SERIES RIVETKING® TOOLS

Quick, Light, Ergonomic and Shock Resistant.

The RK-8000 Series is the best choice for demanding, high volume production-oriented environments. Triple Jaws, and Vacuum mandrel collection comes standard.

The RK-8000S is perfect for 1/8" diameter rivets, while the RK-8000M is best for 3/16" and 5/32". For extended grip or structural rivet applications, the RK-8000LS is suggested. The RK-8000LS is designed with an extra long stroke to insure that the rivet is applied and mandrel is withdrawn completely from the rivet in almost any grip range.

RK-8000S 5/32" MAX.

Power: 1,850 lbsF
Stroke: .787"
Weight: 2.42 lbs

RK-8000M 3/16" MAX.
& STRUCTURALS

Power: 2,450 lbsF
Stroke: .787"
Weight: 3.3 lbs

RIVETKING® LONG STROKE - RK-8000LS

RK-8000LS = LONG STROKE PERFORMANCE!
Extra long stroke, lightweight, ergonomic and shock resistant with triple jaws and vacuum mandrel collection. The RivetKing® RK-8000LS is perfect in long stroke applications such as:

RK-8000LS 1/4" MAX.
& STRUCTURALS

Power: 3,400 lbsF
Stroke: 1.02"
Weight: 3.74 lbs

THE RK-8000LS IS BEST FOR:

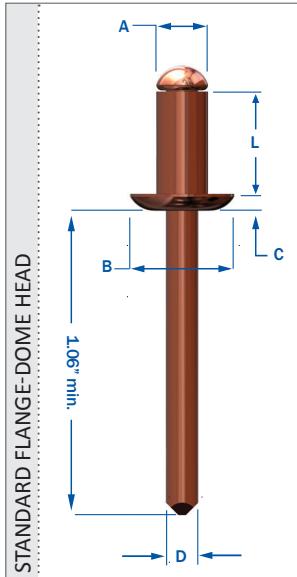

- Structural Rivets
- PLR™ Rivet
- Trifold Rivets
- Long Length Rivets
- Rivets used outside the intended grip range

RivetKing® Copper Blind Rivet

CBS SERIES • RIVET: COPPER • MANDREL: STEEL/COPPER PLATED

RivetKing® offers copper rivet bodies with steel/ copper plated mandrel. The steel mandrel configuration is best for gutter or roofing applications or in electronic or decorative applications where cost is of concern. CBS series rivets meet or exceed IFI 114 specifications.

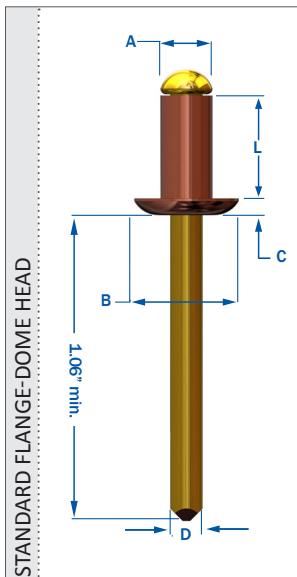

A DIA.	PART NUMBER	GRIP RANGE	HOLE SIZE (DRILL #)	RIVET LENGTH	HEAD DIA.	HEAD HEIGHT	MANDREL DIA.	STRENGTH		Weight Per M
								SHEAR	TENSILE	
1/8"	CBS - 42	.020 - .125	.129 - .133 (#30)	.275	.250	.040	.076			3.1
	CBS - 43	.126 - .187		.337						3.4
	CBS - 44	.188 - .250		.400						3.4

RivetKing® Copper/ Brass Blind Rivet

CBB SERIES • RIVET: COPPER • MANDREL: BRASS

RivetKing® offers copper rivet bodies with a solid brass mandrel. The solid brass mandrel configuration is used in electronics applications where superior conductivity is required or in decorative applications where superior corrosion protection is required. CBB series rivets meet or exceed IFI 114 specifications.

A DIA.	PART NUMBER	GRIP RANGE	HOLE SIZE (DRILL #)	RIVET LENGTH	HEAD DIA.	HEAD HEIGHT	MANDREL DIA.	STRENGTH		WEIGHT PER M
								SHEAR	TENSILE	
1/8"	CBB - 42	.020 - .125	.129 - .133 (#30)	.275	.250	.040	.076			3.1

	CBB - 44	.188 - .250		.400						3.4

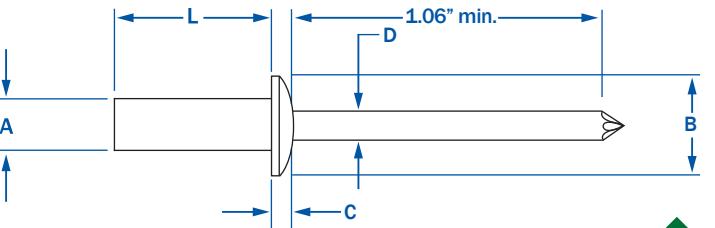

RivetKing® ABA-CE Series • All Aluminum Rivets • Closed End

ALL ALUMINUM-DOME HEAD • CLOSED END BLIND RIVET

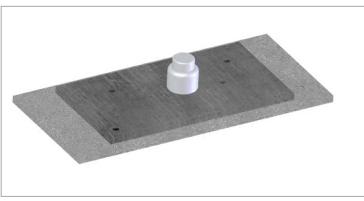

RIVET: DOME HEAD, POLISHED, 1100 ALUMINUM | MANDREL: POLISHED, ALUMINUM | IFI-126 GRADE 9

Closed End Rivets are used when a weather proof/ leak proof seal is needed. Its completely closed end design prevents liquids, moisture, air and other contaminants from entering the riveted hole and/or the rivet itself. The RivetKing® Closed End rivet design guarantees the mandrel head is fully retained within the rivet. RivetKing® Aluminum/Aluminum Closed End rivets are bright polished for aesthetics and to prevent oxidation. The Aluminum Rivet / Aluminum Mandrel configuration is corrosion resistant.

3/32" and 1/4" Diameter Rivets can be quoted on request.

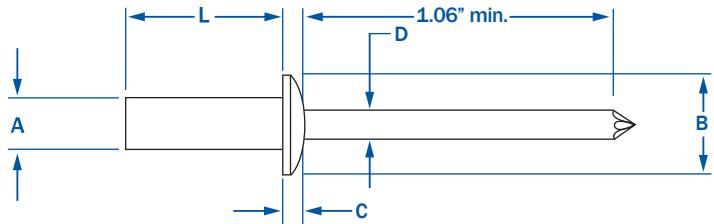

RivetKing® ABS-CE Series • Aluminum/ Steel • Closed End

ALUMINUM/STEEL-DOME HEAD • CLOSED END BLIND RIVETS

RIVET: DOME HEAD, POLISHED, 5056 ALUMINUM | MANDREL: PHOSPHATED, STEEL | PER IFI-126 GRADE 19

Closed End Rivets are used when a weather proof / leak proof seal is needed. Its completely closed end design prevents liquids, moisture, air and other contaminants from entering the riveted hole and/or the rivet itself. The RivetKing® Closed End rivet design guarantees the mandrel head is fully retained within the rivet. Aluminum/Steel Closed End rivets have an aluminum bright polished rivet to resist oxidation and a steel phosphate coated mandrel for improved clamp force during riveting. While the ABS-CE series is an aluminum rivet, be aware that the mandrel is steel and even though withdrawn after riveting, the potential for rust streaks is present. For superior corrosion protection use ABA-CE or FBF-CE.

RivetKing® SBS-CE Series • All Steel • Closed End

ALL STEEL • DOME HEAD • CLOSED END BLIND RIVETS

RIVET: DOME HEAD, ZINC PLATED, C-1002 STEEL | MANDREL: ZINC PLATED, STEEL | PER IFI-126 GRADE 30

Closed End Rivets are used when a weather proof / leak proof seal is needed. Its completely closed end design prevents liquids, moisture, air and other contaminants from entering the riveted hole and/or the rivet itself. The RivetKing® Closed End Rivet design guarantees the mandrel head is fully retained within the rivet. Steel/Steel Closed End rivets are trivalent zinc plated.

For superior corrosion protection use ABA-CE or FBF-CE.

CLOSED END • RIVET: 18-8 STAINLESS • MANDREL: STAINLESS

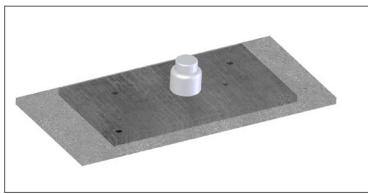

RIVET: DOME HEAD, POLISHED, 300 SERIES STAINLESS STEEL | MANDREL: POLISHED, 400 SERIES STAINLESS STEEL | PER IFI-126 GRADE 51
300 SERIES STAINLESS STEEL MANDREL / 300 SERIES STAINLESS STEEL RIVET • AVAILABLE ON REQUEST BY SPECIAL ORDER ONLY

Closed End Rivets are used when a weather proof / leak proof seal is needed. Its completely closed end design prevents liquids, moisture, air and other contaminants from entering the riveted hole and/or the rivet itself. The RivetKing® Closed End rivet design guarantees the mandrel head is fully retained within the rivet. Stainless/Stainless Closed End rivets are bright polished and contain a grooved mandrel which improves jaw life and maintains positive stroke of the riveter. The All-Stainless configuration is corrosion resistant.

RivetKing® ABS-RT™ Series · "Ring Style" · MultiGrip-RT™

ALUMINUM/STEEL MULTIGRIP™ "RING STYLE"

RIVET: ALUMINUM | MANDREL: STEEL, TRIVALENT ZINC CLEAR PLATED

The benefit of a MultiGrip™ is that they offer a wider grip range then traditional blind rivets assisting the users in inventory reduction and part consolidation efforts. The RT™ series has aesthetic appeal to the backside of the assembly. TS-16949 produced and when applicable on steel, trivalent zinc plated for ROHS and GMW3044 compliance.

RIVETKING® 2 IN 1- BLIND RIVET & RIVET NUT TOOL

WHY BUY TWO TOOLS WHEN YOU ONLY NEED ONE?

This unique tool has the ability to set both blind rivets and rivet nuts. It even has the ability to set 1/4" structural blind rivets and rivet nuts up to 3/8". The changeover from blind rivets to rivet nuts is simple and takes less than 1 minute. It's patented fold away design makes it easy to carry and store. It contains a nose piece for blind rivets and mandrels for rivetnuts in every size and is conveniently stored in the blow molded carry case. Forged Steel arms insure durability while comfort soft touch rubberized grips guarantee comfort.

RK-21 BLIND RIVETS = 1/4" & STRUCTURAL RIVET
 NUTS = 3/8" OR 10MM

FROM BLIND RIVETS
TO RIVET NUTS

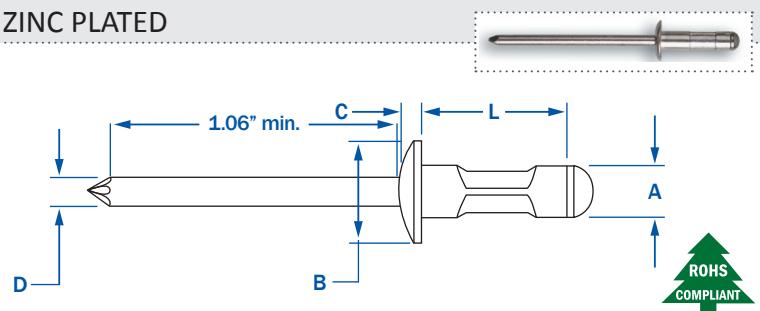

RivetKing® ABS-CT™ Series · "Crimp Style" · MultiGrip-CT™

RIVET: 5056 ALUMINUM • MANDREL: STEEL TRIVALENT ZINC PLATED

RIVET: ALUMINUM | MANDREL: STEEL TRIVALENT ZINC PLATED

The benefit of a MultiGrip™ is that they offer a wider grip range then traditional blind rivets assisting the users in inventory reduction and part consolidation efforts. The CT series has excellent hole fill ability and strength as compared to Standard Blind Rivets and RT series MultiGrips™. TS-16949 produced and when applicable on steel, trivalent zinc plated for ROHS and GMW3044 compliance.

RivetKing® QuikSnap®

NICKEL PLATED BRASS HEAD | STAINLESS MANDREL - SPECIAL NOSE PIECE REQUIRED

The innovative RivetKing® Quick-Snap™ is the ideal companion to the standard canvas snap used on truck bodies, convertibles, boats, cars and many other applications. The snap head is brass, with a bright nickel plating. The mandrel is stainless steel. Requires T105-734 Nosepiece.

The extract force is a minimum of 5 lbs.

RivetKing® RKQ®

HIGH STRENGTH OPEN END • SELF PLUGGING BLIND RIVET

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TM: 3,666,122

AVAILABLE IN STEEL*, STAINLESS STEEL AND ALUMINUM | *STEEL PARTS ARE PLATED WITH CLEAR TRIVALENT ZINC | PER IFI-119

The RKQ® offers is self plugging and offers an interference fit between the knurled mandrel, the rivet body and the hole diameter of the work piece. Its self plugging properties insure that the mandrel is locked within the shear plane which results in superior shear and tensile strength. The RKQ® has a grooved, rattle resistant mandrel which breaks flush with the head in the ideal grip range.

RivetKing® Rivex®

HIGH STRENGTH MULTIGRIP™

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TM: 3,504,672

AVAILABLE IN STEEL* AND STAINLESS STEEL | * STEEL PARTS ARE PLATED WITH CLEAR TRIVALENT ZINC

The Rivex® is an advanced MultiGrip™ with increased performance and functionality as compared to standard steel MultiGrip™ rivets. It is also the only MultiGrip™ that is offered in stainless steel. Rivex® rivets consist of a wider grip range and a higher shear and tensile strength. The Rivex® rivet contains an easy entry mandrel head that is grooved and blunt pointed. Its design is rattle resistant and will break flush with the head in the ideal grip range. Its virtual closed end and flush mandrel break makes this rivet leak resistant.

RivetKing® Rivinox®

STAINLESS STEEL • HIGH SHEAR • REAR FLANGE RIVET

RIVET: 18-8 STAINLESS | MANDREL: 18-8 STAINLESS

The Rivinox® rivet provides for an aesthetic secondary rear flange at the back side of the application. Perfect for thin sheet metals or plastics where rivet pull through is of concern. The mandrel will break nearly flush with the head and contains a locked mandrel to prevent vibration. 18-8 stainless steel constructions provides a corrosion resistant joint.

SPECIAL SIZES AVAILABLE ON REQUEST

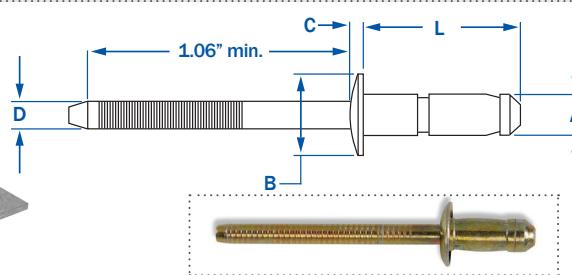

RivetKing® Rivibulb®

ALL STEEL • HIGH SHEAR • REAR FLANGE RIVET

RIVET: C-1010 STEEL, TRIVALENT ZINC CLEAR PLATED | MANDREL: HIGH CARBON STEEL, TRIVALENT ZINC PLATED

The Rivibulb® rivet provides for an aesthetic secondary rear flange at the back side of the application. Perfect for thin sheet metals or plastics where rivet pull through is of concern. The mandrel will break nearly flush with the head and contains a locked mandrel to prevent vibration. Trivalent Zinc Plated for ROHS compliance.

RivetKing® Checkmate®

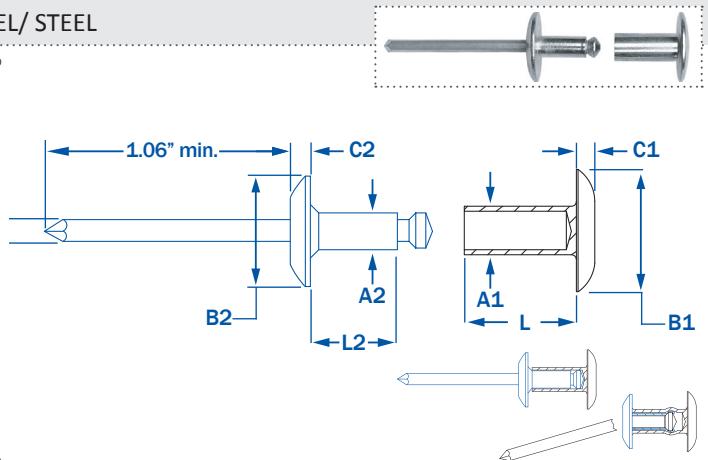

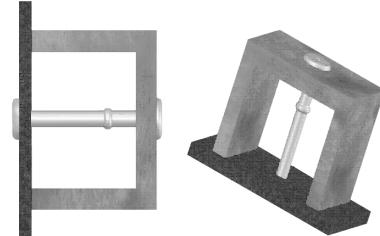

2 PIECE RIVET • MALE/FEMALE

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING | PATENT/TRADEMARK 3,504,664

AVAILABLE IN ALUMINUM/ALUMINUM, ALUMINUM/ STEEL, STEEL/ STEEL

The RivetKing® Checkmate® is the only breakstem permanent fastener to have near flush and aesthetically appealing installation on both sides.

A true head on both sides of the rivet. This rivet is offered in extended lengths and has one of the longest grip ranges available.

RivetKing® Trifix™

ALL ALUMINUM • TRI-FOLDING RIVET

RIVET: ALUMINUM | MANDREL: ALUMINUM

Perfect for inconsistent grip ranges or oversize out-of-round holes that are typical in plastics. RivetKing® Trifix™ is designed to work like a moly-bolt in that it splits out into three legs at the backside. Its extended bearing surface spreads the load over a wider area to prevent pullout in plastics or other similar soft or thin sheet materials. Bright polished and stocked in white, black and almond colors.

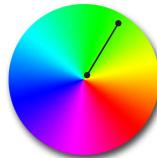

SAMPLE COLOR OF THE TRIFIX™

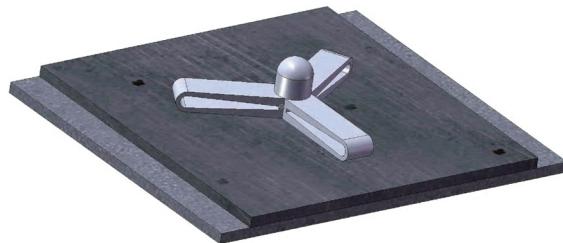

STOCK COLORS

WHT	ALM	BLK	BA

* Can color match to Pantone, RAL or sample upon request.

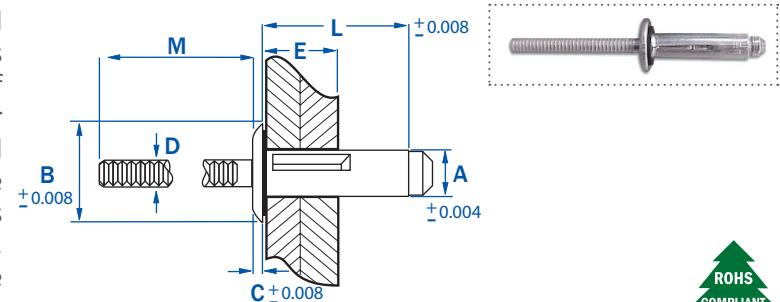

RivetKing® Super Trifix™

ALL ALUMINUM • HIGH STRENGTH TRI-FOLDING RIVET

The Super Trifix™ is designed for use in thin sheet metal or soft materials where strength of the riveted joint is of concern. Typically used in repair and replacement of solid rivets in truck bodies, these rivets offer superior shear and tensile strength than that of the standard Tri-Fix™. The mandrel stays within the shear plane and breaks flush with the head. A neoprene washer is affixed under the head to make a weather tight seal. Due to the externally locked mandrel, a special nose piece is required for the installation tool.

PART NUMBER	RIVET SIZE	LENGTH	HEAD DIA	HEAD HEIGHT	MANDREL DIA	OVERALL LENGTH	GRIP RANGE	HOLE SIZE	SHEAR LBS. F	TENSILE LBS. F

		(20.5)								
		1.043								

*3/16"

These rivets are made according to a DIN standard in which the body diameter is actually .205 (5.2mm).

The 3/16" inch designation has been applied as a reference only as the actual rivet is .205 diameter.

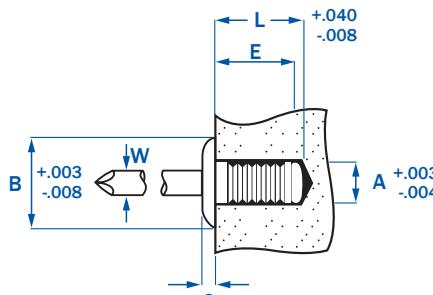

Please insure the hole design is .208 - .221 to accommodate the rivet.

RivetKing® Grooved Rivets™

RIVET: ALUMINUM | MANDREL: STEEL, TRIVALENT ZINC PLATED

Grooved Rivets are designed to be installed within a hole made of a fibered material such as wood and some low-medium density plastics. When set properly, the annular rings of the grooved rivet will bite into the wood or plastic and will radially expand within the hole. Keep in mind, this rivet is designed to expand within a hole and not at the rear side like most blind rivets. Only one fibered material is necessary as long as it is the final substrate. Other materials can be fastened to wood products as long as it is between the head and the wood. In this case be sure there is enough material thickness of the fiber material so the rivet can seat properly.

RivetKing® Plastic Trifix® Rivets

Plastic TRIFIX® Rivets are typically used to fasten fabric composites for automotive interiors panels. Produced of black Supertough Nylon and Acetal grade, the TriFix® has been tested for shear/tensile strength and can withstand vibration for the life of the fastener. Other industrial applications include fastening plastics, metal, fiberglass, plastic composites, fabric, and glass. Plastic fasteners are non-conductive, non-corrosive and contain UV inhibitor layer to prevent UV light deterioration.

RIVETS CAN BE SET WITH THE NEW RK-PL

RivetKing® Long Length Rivet

ALUMINUM/ STEEL LONG LENGTH BLIND RIVETS DOME HEAD

RIVET: ALUMINUM | MANDREL: STEEL, TRIVALENT ZINC PLATED

Long length blind rivets are used in areas that require a thick grip range that goes beyond standard sizes. Used in insulation, roofing or other industrial extended grip, blind side applications.

3/16" **

The 3/16" rivets are made according to din7337 standard in which the body diameter is actually 5mm (.196). The 3/16" inch designation has been applied as a reference only as the actual rivet is .196 diameter. Please insure the hole design is greater then .200 to accommodate the rivet.

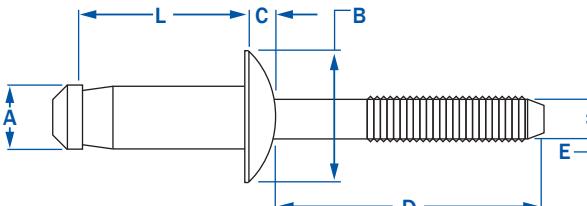

RivetKing® Stemlock®

STRUCTURAL BLIND RIVETS • STEEL/ ALUMINUM

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TRADEMARK: 3,504,665

AVAILABLE MATERIALS: ALL STEEL, ALL ALUMINUM DOME HEAD

The Stemlock® is an advanced structural fastening solution that has among the highest shear and tensile values available because the mandrel is locked into the shear plane. The internal locking mechanism insures positive mandrel retention and will break flush with the head. The Stemlock® is designed to form a bearing surface flange at the rear side of the substrate. This rear flange is perfect for thin sheets or imperfect holes offering impressive clamp up forces without deforming the substrate.

RivetKing® Tigerbolt®

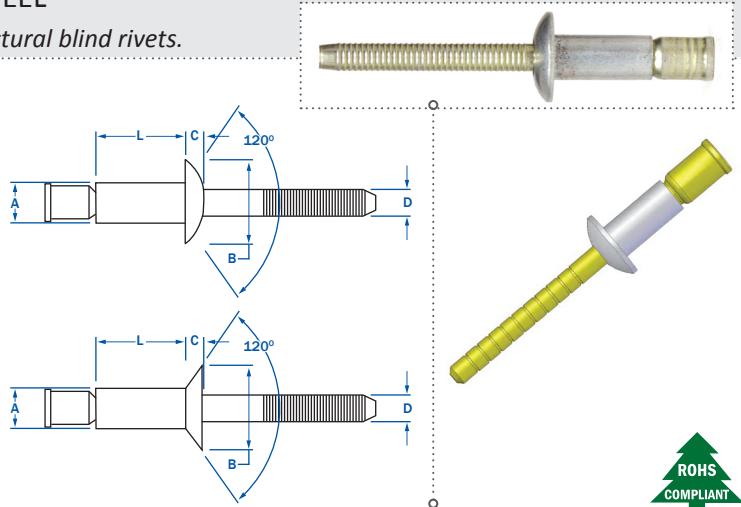

STRUCTURAL BLIND RIVETS • EXTERNAL LOCKING

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TM: 2,386,588

AVAILABLE IN STEEL, ALUMINUM, AND STAINLESS STEEL

** A Special nose piece is required to set externally locked structural blind rivets.*

The RivetKing® Tigerbolt® is a structural rivet with an external locking feature. This locking feature is visible after the rivet is applied. When applied, the special nose piece that is required to set the rivet creates a small expansion of a shoulder on the mandrel in a pocket located on the surface of the rivet head. The locking feature can then be inspected and confirmed to be effective during assembly. The Tigerbolt® has a stronger clamp up than the In-lock® and is tighter at minimum grip. The mandrel is retained within the shear plane yielding high strength under shear loads and the external lock insures positive mandrel retention which results in high strength under pullout loads. Typically used in the manufacturing or repair of truck bodies, the Tigerbolt® is leak resistant and has excellent clamp-up force. The Tigerbolt® has a wide grip range and is offered in two diameters and two lengths. The mandrel breaks flush with the head when applied and is set with a special nose piece.

 **CELUS®**
MADE IN THE USA
A RIVETKING® BRAND

TIGERBOLT®

RivetKing® In-Lock®

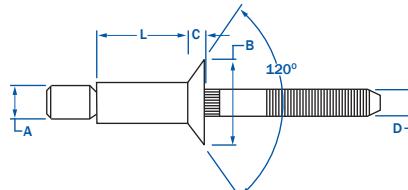

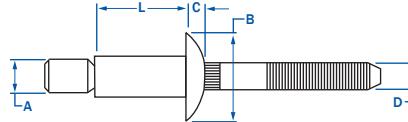

STRUCTURAL BLIND RIVETS • INTERNAL LOCKING

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TM: 77/613.050

AVAILABLE IN STEEL, ALUMINUM, AND STAINLESS STEEL | COMPLIANT WITH IFI 134

* Any nose piece can be used. No special requirement.

The RivetKing® In-Lock® is a structural rivet with an internal locking feature. The locking feature is not visible when the rivet is applied. The mandrel is retained within the shear plane yielding high strength under shear loads and the internal lock insures positive mandrel retention which results in high strength under pullout loads. Typically used in the manufacturing or repair of truck bodies, the In-Lock® is leak resistant and has excellent clamp-up force. The In-Lock® has a wide grip range and is offered in two diameters and two lengths. The mandrel breaks flush with the head when applied and is set without a special nose piece.

.313 (\varnothing 7.9) and .375 (\varnothing 9.5)
RIVET: Aluminum, natural.
PIN: 7075 Aluminum, natural.

INSTALLATION FOR RIVETKING® DRIVE RIVETS

INSTALLATION INSTRUCTIONS

1. Use a carbide tipped spiral masonry drill, same diameter as rivet [.250 (\varnothing 6.4) or .188 (\varnothing 4.8)]. Drill to any depth, deep enough to permit full insertion of rivet.

2. Insert rivet through material to be attached and into wall. No other parts to apply-rivet works like a nail.

3. Drive the pin just flush with rivet head, using ordinary hammer. Rivet prongs expand deep in masonry where it is strongest.

4. That's all. Attachment is complete. To remove, drill head off or, if hole is deep enough, drive pin through and pull rivet out.

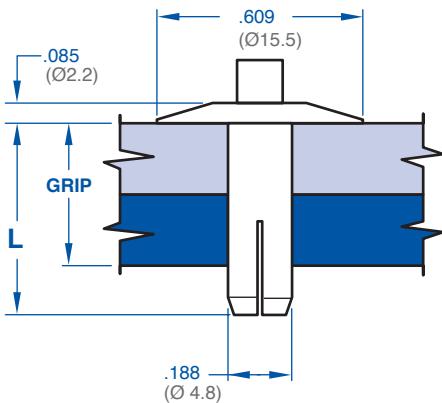

RivetKing® Drive Rivets

RivetKing® RivetNut Design Considerations

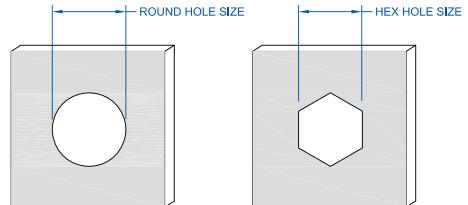

A. GRIP RANGE

Determining the length of the rivet is critical to insure the rivetnut will function as it was designed. If the rivetnut is applied over or under its intended grip range, it will not work properly. Be sure to accommodate for the "theoretical" grip versus the "actual" grip. While two pieces of sheet metal each are .055 thick, it doesn't necessarily mean that the actual grip will be .110. Burrs or bends in the sheet metal could affect the theoretical grip.

B. HOLE SIZE & SHAPE

The Rivetnut will only work if it is within the prescribed hole size. Additionally, the design engineer should calculate the manufacturing tolerances of the hole to insure proper fit so that interference issues will not surface at a later time. Holes should be round for round body rivet nuts, and hex for hex body rivet nuts. Oval, Square or out-of-round shapes require a rivetnut to be custom produced.

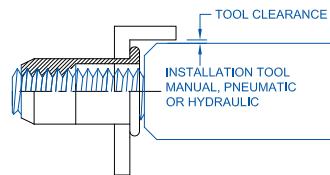

CLEARANCES

This is one of the most common oversights occurring in product designs.

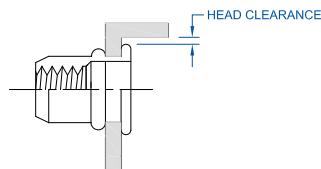

C. TOOL CLEARANCE

Sufficient clearances (above the hole) for which the rivet will go through so that riveting equipment can sufficiently access the hole to be riveted without interference. Be sure to select the riveting equipment in the design phase to prevent the need for customized and potentially costly tooling modifications.

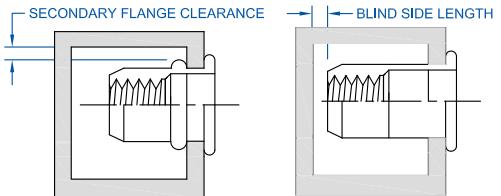

D. HEAD CLEARANCE

Axial access is required on the primary sheet to be riveted to allow for the flange to overlap the hole without interference. When designing the primary hole, make sure to calculate the head diameter and its tolerances and layout the foot print of the head on the hole. This is especially critical when riveting on brackets, near other hardware, or next to bends, folds, extrusions and/or cutouts on the sheet metal.

E. BLIND SIDE CLEARANCE

Since the blind side of the rivet nut is designed to form into a secondary flanged bearing surface, it is important to leave room for the flange to expand and to seat properly. Additionally, the collapsed height is shorter than the height before installation. Make sure the backside can accommodate the entire rivet before riveting. Testing should be done in the design phase to calculate what distances are needed.

GALVANIC ACTION

Galvanic action is seldom considered in design but can often be one of the hidden causes of failures. Galvanic corrosion is accelerated electromechanical corrosion produced when a noble metal is in contact with another less noble metal, both being in corrodng medium (such as damp air). The less-noble metal corrodes at faster rate than normal while the noble metal acquires greater corrosion protection. For an example, an aluminum (less-noble metal) rivet in copper (more-noble metal) would cause aluminum to corrode at an accelerated rate while the copper would be virtually unattacked. Should you be in a position of having to join two dissimilar metals, be sure to consult the galvanic series table.

CORROSION PROTECTION

The corrosion factor of a particular rivet is dependent on the corrosivity of the base metal, the protection layer (plating), and the conversion layer (chromate). Being that the most cost effective material to produce is steel, most prefer to protect the steel with a plating such as Zinc and a chromate. Rivetnuts require a specialized plating & wax therefore it is highly suggested the manufacturer perform this task. Do not attempt to reprocess rivetnuts! For standard performance a SST rating (salt spray test) is about 48 hours until Red Rust. Other platings such as Zinc alloy's (ZnNi, ZnFe, ZnTi) that are available which can extend the SST rating to 840 hours until red rust. Be sure the plating is tested by the manufacturer per ASTM B117 standard and that the manufacturers' lab is proficiency tested semi-annually.

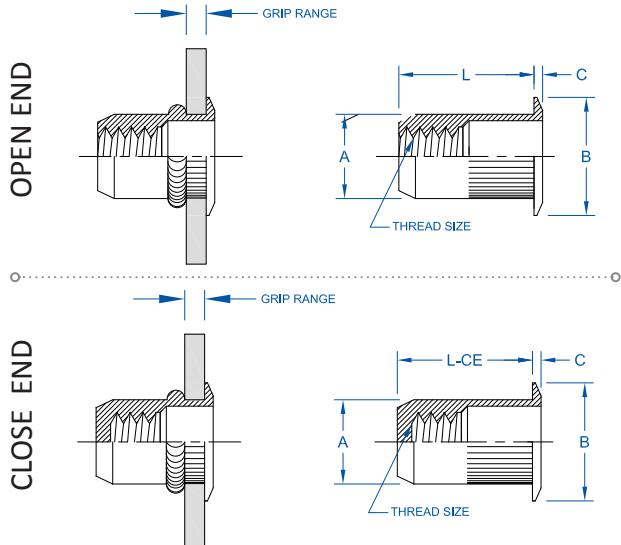

IKF Series® Low Profile Head · Knurled Body

THINWALL AMERICAN STANDARD RIVETNUTS

RIVETNUTS

IKF SERIES®

The RivetKing IKF Series is a thinwall Rivetnut with a low profile head. Its design is such that spin/spin tools can easily collapse and properly set the rivet nut. The low profile head is nearly flush and offers greater bearing surface compared with IKR series. Spin-Spin or Spin-Pull tools can be used to apply IKF series rivetnuts.

IRL Series™ Large Head · Heavy Duty · Smooth Body

THICKWALL AMERICAN STANDARD RIVETNUTS • FOR HEAVY DUTY APPLICATIONS

IRL SERIES®

The RivetKing IRL Series is a heavywall/thickwall Rivetnut. This robust design upgrades the thickness of both the body and the head height. The robust IRL series offers higher pullout resistance and increased endurance of the joint and assembly. Spin-Pull tools are recommended for installation of IRL series rivetnuts.

IRR Series™ Reduced Head · Smooth Body

THINWALL AMERICAN STANDARD RIVET NUTS • FOR STANDARD HOLE SIZES

RIVETNUTS

IRR SERIES®

The RivetKing IRR Series is a thinwall insert that has been designed specifically for convenience. Often the holes of hardware are pre-drilled or pre-punched to a standard hole size. This may cause difficulties with traditional rivetnuts which require an off-standard hole diameter. The IRR series have been produced to fit in common hole sizes that may be found in pre-designed hardware and assemblies.

IPB & IPN Series™ Quadrafold™ RivetNut

PRE-BULBED & STRAIGHT SHANK QUAD FOLDING RIVETNUTS

RIVETNUTS

IPB & IPN SERIES

The RivetKing IPB and IPN Series Rivetnuts do what traditional rivet nuts cannot. This series is designed for soft materials such as plastics, fiberglass and thin sheet metal where increased pullout resistance is required. The fastener performance is dictated by the four folding tines that are extended during the riveting process. The result is an upset of metal that is nearly three times the diameter of the hole. This series is offered in both pre-bulbed & straight shank versions. The pre-bulbed version is designed to work with spin-spin tools, while the straight shank version is designed to work with spin-pull tools only.

IPN SERIES - STRAIGHT SHANK

IPB SERIES - PRE-BULBED

JK Series™ JK Nut

AMERICAN STANDARD

RIVETNUTS

JK NUT

The RivetKing JK Series, JK Nut is a low cost alternative to IPB Series in non-load bearing applications. Ideal applications for JK Nuts are when they can be applied to paperboard, cardboard, or thin plastics. For weather resistance, the JK nuts can be coated in vinyl in any color.

JF Series™ Rubber Nut

AMERICAN STANDARD

RUBBER NUT

The RivetKing JF Series Rubber Nut are used as a removable rivetnut. Installation is performed with the bolt or screw itself. To remove the rivet nut, just remove the bolt or screw. Rubnuts can also be used as vibration isolators to prevent the rattle and pullout. Typical applications are for the installation of mirrors or other hardware in utility trucks, compressors, and engines.

ISR & ISN Swaging Series™

AMERICAN STANDARD RIVETNUTS • FOR BLIND HOLES OR LARGE GRIP RANGE

RIVETNUTS

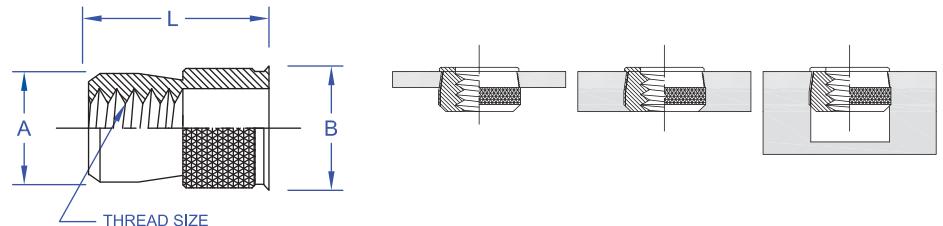

ISR SWAGING SERIES™ | STRAIGHT KNURL - FOR METALS

The RivetKing ISR/ISN Series has the grip range that most rivetnuts lack. It has an unlimited maximum grip range which will work in all thickness above .030 (ISR Series) and .062 (ISN Series). The ISR series is designed for use in any metal, while the ISN series is designed for use in any material softer than itself such as plastics, fiberglass, and plywood.

IHF Series™ Half Hex Body • Low Profile Head

THINWALL AMERICAN STANDARD RIVETNUTS • FOR USE WITH SPIN-SPIN TOOLS

IHF SERIES

The RivetKing IHF Series is a thinwall half hex insert for use in hexagon holes. The half hex thinwall rivetnut is designed for use with spin-spin tools. The torque to set is far less than the full hex heavy wall inserts. The low profile head is wide and thin and allows for a near flush installation. Spin-Spin or Spin-Pull tools can be used to set the IHF series.

NKL Series™ Knurled Body · Large Head

EUROPEAN STANDARD RIVETNUTS • HEAVYWALL RIVETNUTS

NKL SERIES

The RivetKing NKL Series is a heavywall European Style Rivetnut. This robust design upgrades the thickness of both the body and the head height. The robust IRL series offers higher pullout resistance and increased endurance of the joint and assembly. The NIK series has a large head and a knurled body which resist spin out. Spin-Pull tools are recommended for installation of NIK series rivetnuts.

NKR Series™ Knurled Body · Reduced Head

EUROPEAN STANDARD RIVETNUTS • HEAVYWALL RIVETNUTS

RIVETNUTS

NKR SERIES

The RivetKing NKR Series is a heavywall European Style Rivetnut. This robust design upgrades the thickness of both the body. The NKR series offers higher pullout resistance and increased endurance of the joint and assembly. The NKR series has a reduced head and a knurled body which resist spin out. Spin-Pull tools are recommended for installation of NIK series rivetnuts.

QUICKRIVETING SYSTEM

RIVETKING® QUICKRIVETING SYSTEM

What is QuickRiveting?

THE MODERN, FASTER, LOW FINISHED COST SUCCESSOR TO BLIND RIVETING.

QuickRivets are permanent fastener designed for blind or 1 sided riveting in medium and high volume applications. Rivets are aligned in a paper strip called a pod or magazine so that the rivets can be automatically fed into the quickriveter. The result? An increased output, lower assembly cost and labor saving permanent fastening solution.

WHY QUICKRIVETING?

INCREASED OUTPUT

QuickRivets can be installed up to 4 times faster than traditional blind rivets or screws. Cycle times are limited to less than 2 seconds and installation speeds can reach up to 30 ppm (Semi-Automatic) and 60 ppm (Fully Automatic).

REDUCED LABOR

Many users require additional labor to pre-install standard rivets or screws for faster assembly. The QuickRivet eliminates this task, by allowing the user to feed the rivets themselves. And in those applications where the user is installing the standard blind rivet or screw individually by hand, the QuickRivet offers the increased assembly speed because the feed of the tool occurs once per pod, as apposed to once per rivet. The increased output leads to a reduction the number of assemblers required to meet the manufacturing demand of your product.

MINIMAL WASTED, IMPROVED SAFETY

Standard blind rivets have a disposable nail or mandrel that can pose a safety problem when dropped on the floor. The QuickRivet System employs a re-usable mandrel that can be used for up to 50K rivets. The only waste generated is that of the paper pods (made of recycled paper), which can again be recycled.

COST SAVINGS

Increased Output & Production Capacity, Reduced Labor Cost, Minimized Waste and Improved Safety equals overall cost savings to the user.

IMPROVED JOINT QUALITY AND PERFORMANCE

Permanent fastening offers a higher clamp up value then that of screws. In addition, because of the clamping force applied, the joint is more secure when under shear and tension loads as well as resists vibration.

FINE TUNING AND FLEXIBILITY

Due to the variety of rivet types, materials, front jaw assemblies, and mandrel sizes, the QuickRiveting System® can be fine tuned to work perfectly with your application. Whether a tight clinch for good hole fill or a light clinch for use as a pivot or when used with fragile PCB's. The QuickRivet System is completely customizable, yet can be interchanged with other QuickRiveting products for use on other assembly lines.

RELIABILITY AND CONSISTENCY

When the proper QuickRiveting Components are selected, you can be sure that the rivets will perform consistently both during and after assembly, eliminating the need for frequent adjustments.

PERFECT FOR ELECTRONIC AND PCB APPLICATIONS

A Typical problem in standard blind riveting for electronic applications is due to the remaining portion of the nail or mandrel left in the rivet after assembly. Under the right conditions this small piece of the mandrel can fall out of the rivet into the electronic component causing a short circuit. QuickRivets are not affected by this condition because the mandrel is completely withdrawn from the rivet during assembly. In addition, QuickRivets are a great catalyst in dispersing heat generated in electronic components which makes it perfect for high temperature environments such as HeatSinks, Rambus Fixtures and Microchips.

ZIPSHO®

ZIPSCREW®

RivetKing® Rk-753™ Assembly Tool

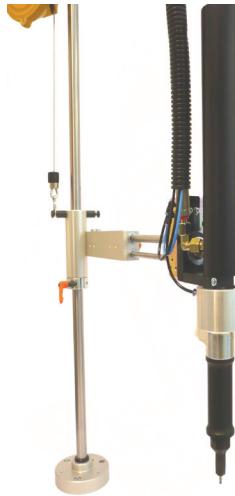

RK-753 QUICKRIVETING HAND TOOL

Built with speed, power, and reliability in mind, the RK-753™ is your turnkey solution to installing ZipRiv®, ZipSho®, ZipScrew®, and ZipGroove™ QuickRiveting products.

The RK-753 HydraPneumatic QuickRiveter™ separates the nose of the tool from the weight of the tool body, therefore, the operator carries only 2.37 lbs, while the heavier remote intensifier is stored at ground level. In addition, an on-board oil reservoir allows for proper lubrication during use. Applicable nose pieces, mandrels, springs, and spare parts are always available from your local distributor.

RK-753-P3 QUICKRIVETING HAND TOOL

TECHNICAL SPECIFICATION AND PERFORMANCE DATA

SETTING CAPACITY: 3/32" (2.4) – 1/8" (3.2) – 5/32" (4.0) – 3/16" (4.8)

RIVET TYPES: RIVETKING® ZIPRIV®, ZIPSHO®, ZIPSCREW®, ZIPGROOVE™ AND ZIPTRONIC™, AVDEL®, BRIV®, CHOBERT®, RIVSCREW®, GROVIT® AND AVLUG®, AVTRONIC®

AIR SUPPLY PRESSURE: 72.5 - 101.5 PSI

FREE AIR PRESSURE: 74 PSI WITH 158.66 IN

TRACTION POWER @ 90PSI: 874 LB/F

STROKE LENGTH: 1.18" MINIMUM

CYCLE TIME: 1-2 SECONDS

WEIGHT: 2.376 LBS

VIBRATION: 2.7 M/S

OVERALL LENGTH: 18.70" INCHES

NOISE LEVEL: 70 DBA MAX.

INTENSIFICATION RATIO: 30:1

RivetKing® ZipScrew®

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TRADEMARK: 3,668,000

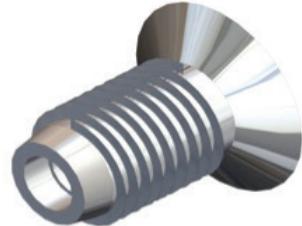

ROHS COMPLIANT

ZIPScrew®

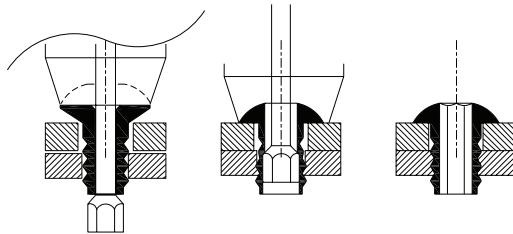

The RivetKing® ZipScrew® is a unique fastener which allows for the continuos removal and replacement after it is installed. Most often its used in electronics where the removal and replacement of microchips, chipsets, mosfets, access doors and other areas where the removal of the rivet by the end user may be required.

Often times the ZipScrew® is preferred over traditional screws since the user benefits from the installation speed of a rivet and the removability of a screw. Once installed, the user can use a standard hex key to remove the rivet, and later reinstall the rivet just like a screw. The ZipScrew® radial expands resulting in a vibration resistant assembly. Can be used in materials with less than 105 Hv5 hardness.

NOTE: LONG MANDRELS AND LONG SPRINGS ARE AVAILABLE. FOR LONG MANDRELS AND SPRINGS ADD THE FOLLOWING TO THE PART NUMBER.

Standard Mandrels 19" (483) or Standard Springs: Specified Above

Long Mandrels 20" (508) or Long Springs: Add "L" to the Part Number

Extra Long Mandrels 21" (533): Add "XL" to the Part Number

METRIC DIMENSIONS ARE IN PARENTHESIS

RivetKing® Nose Jaw Selection

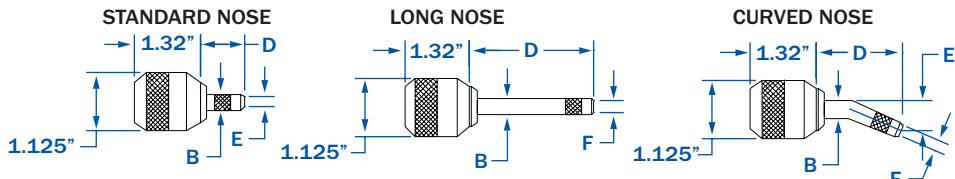

THE FOLLOWING PRODUCT IS COVERED UNDER THE FOLLOWING PATENT/TRADEMARK: 3,668,000

ROHS COMPLIANT

NOSE JAW SELECTION

The Nose Jaw is an integral part of the QuickRiveting System®. The type of Nose Jaw you select is application dependent. While the flat end form is most common, the recessed end form allows for high clamp up or can be used to deform a countersunk head

into a dome head. Long Nose Jaws are used in hard to reach or limited access areas. Nose Jaws can be designed to fit your application. Contact our applications engineering department for custom designs and application assistance.

RivetKing® Fastener & Tooling Selection

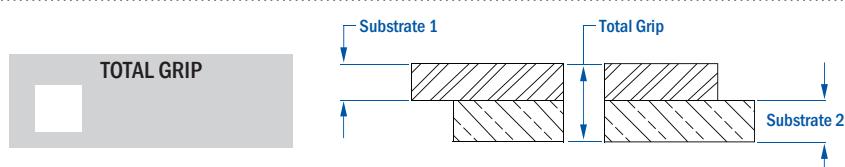

- STEP 1:
Determine rivet type and rivet material preference.

- STEP 2:
Determine the closest nominal rivet diameter via your hole size. Then record the actual hole diameter in the box to the right.

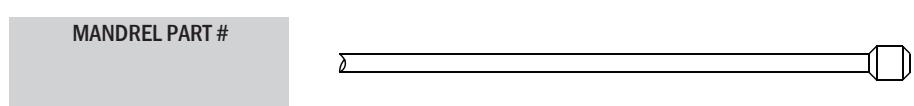

- STEP 3:
Determine rivet grip range via total grip thickness. Record the actual total grip thickness of your assembly to the right.

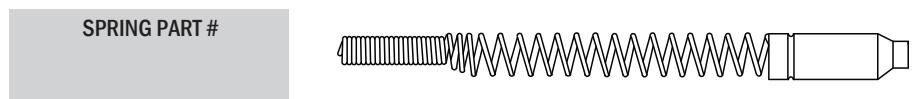

- STEP 4:
Determine the rivet part number by using the chart above, and record it to the right.

- STEP 5:
Determine proper mandrel size by referencing the actual hole diameter to the chart. Record the mandrel Part# to the right.

- STEP 6:
Determine proper spring size by referencing the chart. Record the spring part# to the right.

- STEP 7:
Depending on the type of clinch you prefer, choose the proper Nose Jaw. If you are not sure, choose standard, flat. Record the Nose Jaw part# to the right.

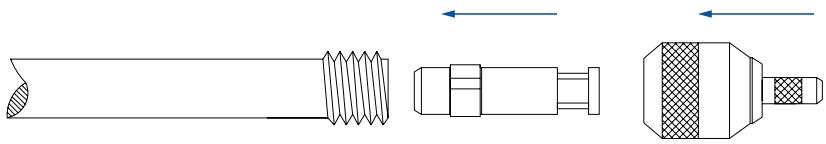

RivetKing® Set-Up & Assembly Process

STEP 1:

Install the indexing cursor into the barrel portion of the rivet tool making sure it is facing the proper direction. Then screw on the Nose Jaw assembly on to the barrel.

STEP 2:

Insert the mandrel into the hole of the podded rivets. Then tear off and dispose of the podding paper.

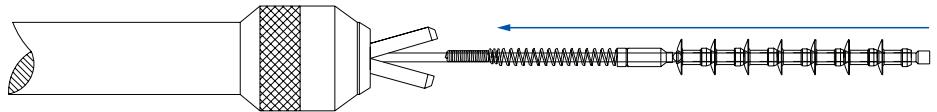

STEP 3:

Insert the mandrel into the hole of the podded rivets. Then tear off and dispose of the podding paper.

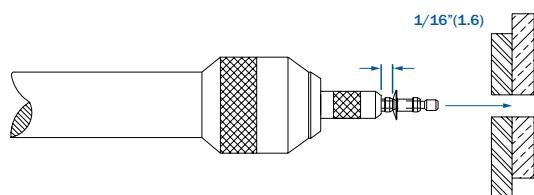

STEP 4:

Split the Nose Jaw open and insert the mandrel assembly (mandrel, spring and rivets), inside the Nose Jaw until the last rivet remains outside of the Nose Jaw.

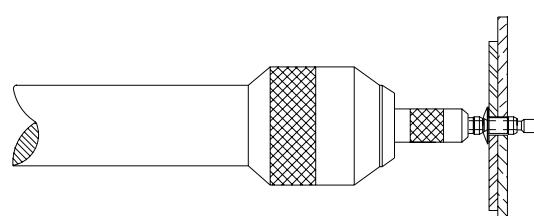

STEP 5:

Make sure the head of the rivet is about $1/16"$ away from the front of the Nose Jaw. Proper spacing must be assured.

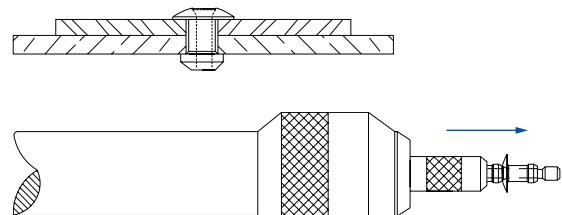

STEP 6:

Using the handle of the tool, insert the rivet and mandrel through the hole of your work piece until the head is sitting flush on the bearing surface. Pull the trigger to actuate the tools cycle and clinch the rivet.

STEP 7:

After proper assembly, the next rivet will automatically feed through the Nose Jaw to advance the next rivet.
